Saleh Alomair

AI/ML Engineer

salehomair1424@gmail.com +966 534096304 github.com/SalehAlomair
linkedin.com/in/salehalomair Riyadh, Saudi Arabia

SUMMARY

Computer Science graduate from Qassim University (2026) and recent graduate of Tuwaiq Academy's AI Solutions Development Bootcamp. Built and deployed projects in agentic AI, RAG and MLOps, with a focus on evaluation and reliable retrieval.

EXPERIENCE

AI Engineer Intern 06/2025 – 08/2025
Smart Methods
- Built an Arabic voice assistant: Whisper STT, Cohere command-r7b-arabic generation, and in-memory streamed TTS to cut playback latency.
- Developed a real-time drowsiness detector (dlib landmarks + Eye Aspect Ratio) at ~30 FPS on CPU, with tunable thresholds and threaded alerts.

EDUCATION

AI Solutions Development Bootcamp 07/2026 – 09/2026
Tuwaiq Academy Riyadh, SA
Top Performer — Week 8. Capstone: Baseerah (see Projects).

B.Sc. in Computer Science 08/2021 – 06/2026
Qassim University Qassim, SA
GPA: 4.28 / 5.00 | Graduated: June 2026

PROJECTS

Baseerah | Tuwaiq Academy Capstone 07/2026 – Present
- Co-built a bilingual app that presents daily AI developments as articles and podcast conversations between two AI voices.
- Finds unanswered research questions, checks them against newer papers with supporting sources, and generates master prompts for research plans or AI coding assistants.
- Developed gap verification, fine-tuned search embeddings, and deployed on AWS with CI/CD.

Multi-Agent Technical Support 08/2026
- Built a chat assistant that answers technical questions, guides troubleshooting and escalates unresolved issues to a person.
- Fine-tuned Qwen with LoRA and used LangGraph to route requests between document answers, support guidance and diagnostic demo tools, with conversation tracing.

EvidenceOps | Agentic Research Assistant 07/2026 – 08/2026
- Built an assistant that searches internal documents, compares evidence and drafts research reports.
- Used LlamaIndex and AWS Bedrock with CLI/API access, approval before saving reports, action limits and audit logs.

Riyadh Air Quality | MLOps Platform 07/2026
- Co-built a web app that forecasts next-hour pollution in Riyadh, showing the probability of exceeding the local baseline.
- Built the weather/pollution data pipeline and calibrated its threshold; the platform includes an API, experiment tracking and prediction monitoring.

CERTIFICATIONS

- **Machine Learning with Python — IBM**
- **Introduction to Deep Learning & Neural Networks with Keras — IBM**

SKILLS

Programming & Data: Python, SQL, PostgreSQL, NumPy, Pandas, Scikit-learn
Deep Learning & AI: TensorFlow, Keras, PyTorch, Computer Vision (OpenCV, dlib), NLP, HF Transformers
LLMs & Agents: RAG, LlamaIndex, FAISS, AWS Bedrock, Agentic AI, Contrastive Embedding Fine-Tuning
MLOps: AWS (EC2/IAM/SSM), Docker Compose, FastAPI, MLflow, Gradio, GitHub Actions (CI/CD)
Languages: Arabic — native; English — B1
